

YOUSIF AMR

Full-Stack / Backend Software Engineer

Cairo, Egypt | +20 10 9400 5690 | yousifamr811@gmail.com | github.com/yousifamr-webdev | linkedin.com/in/yousif-amr-b065723bb

PROFESSIONAL SUMMARY

Civil Engineering graduate transitioning into full-stack software development with over a year of experience building responsive web applications. Applied engineering problem-solving to master JavaScript, TypeScript, Node.js, and React. Focused on building comprehensive backend services with NestJS alongside intuitive frontends.

TECHNICAL SKILLS

- **Backend:** Node.js, NestJS, Express.js, RESTful APIs, Socket.io
- **Frontend:** React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Bootstrap 5, Tailwind CSS
- **Databases:** SQL (MySQL), MongoDB, Mongoose, Sequelize
- **Security & Validation:** JWT Authentication, Role-Based Authorization, Joi Validation
- **Tools & DevOps:** Git, GitHub, Docker, Redis, npm, Postman

WORK EXPERIENCE

Full-Stack Software Engineering Trainee | Route IT-Training Center | March 2025 – July 2026

- Owned end-to-end development of full-stack web applications, covering responsive interfaces, backend APIs, database integration, authentication, and validation.
- Developed modular RESTful APIs with Node.js, Express.js, and NestJS, integrating both relational SQL and NoSQL MongoDB databases.
- Applied Git version control, feature branching, modular architecture, and structured error handling to maintain organized and reliable codebases.

TECHNICAL PROJECTS

Full-Stack E-Commerce Application | Next.js, NestJS, TypeScript, NoSQL, JSON Web Tokens

Live Demo: <https://e-commerce-green-ten-54.vercel.app/> | [GitHub Repository](#)

- Built an end-to-end e-commerce platform featuring **68 RESTful API endpoints** to power user authentication, product catalog management, cart workflows, wishlists, and coupon integrations.
- Implemented JWT authentication and role-based authorization to protect user and administrative routes.
- Architected **11 NoSQL data models** using Mongoose, enforcing schema validation and population to handle relational dependencies efficiently.
- Added Zod validation to verify and sanitize incoming API payloads before business-logic processing.

Real-Time Social Media Platform | React.js, Node.js, Express.js, Socket.io, MongoDB

Live Demo: <https://social-app-sable-xi.vercel.app/login> | [GitHub Repository](#)

- Built a full-stack social platform supporting profiles, posts, comments, likes, and real-time user interactions.
- Integrated Socket.io for live messaging and real-time feed updates without requiring page reloads.
- Structured the Node.js/Express backend using MVC separation to isolate API routing from business logic.
- Managed React UI state with hooks so messages and notifications update dynamically as events arrive.

Location-Aware Weather Analytics Dashboard | JavaScript, Web APIs, HTML5

Live Demo: <https://yousifamr-webdev.github.io/Weather-App/> | [GitHub Repository](#)

- Built a client-side dashboard that consumes third-party REST APIs to retrieve, format, and display real-time weather data.
- Integrated the browser Geolocation API to automatically retrieve the user's location and present localized weather conditions.
- Added try-catch error handling for failed network requests and missing response properties to improve application resilience.

Core Technical Utilities & Portfolio | React, Vite, Vanilla JavaScript

- Designed and deployed a responsive portfolio with React and Vite to present technical projects and development work.
- Built browser-persistent bookmarking and sticky-notes utilities to strengthen JavaScript, DOM manipulation, and client-side state-management skills.

EDUCATION & CERTIFICATES

Bachelor's Degree in Civil Engineering | University of Alexandria, Egypt | Graduated July 2026

Full-Stack Engineering Certificate | Route IT-Training Center, Egypt | July 2026
